ARCHI.NET

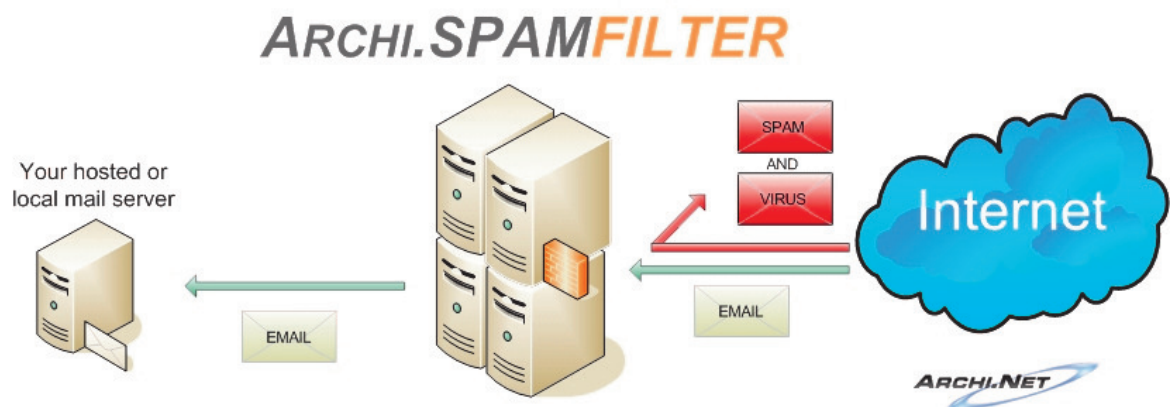

Spamming becomes a real problem which generates the reduction of employees productivity and a degradation of bandwidth, representing a cost for companies. Figures speak for themselves about 50% of today's e-mails are spams.

To fight this global pest (the majority of spam come from outside Europe). The French company Archi.Net offers an ingenious solution which reconciles performance and simplicity. With the on-line externalized service Archi.SPAMFILTER you do not have to care about difficulties due to PSAM. Our solution avoids heavy and expensive investments because the SPAM fight task is delegated and surrounded by professionals that guarantee the quality and the availability of the service.

Undesired e-mails are refused even before they arrive on your e-mail server and thus do not block either your network or the network performances. Security is another advantage as the solution effectively fights attacks of denial of service, relaying and viruses.

ADVANTAGES ET BENEFITS

Archi.SPAMFILTER requires no modification of architecture and no downloading or installation of software onto your IT environment. Archi.SPAMFILTER is a gateway thus Archi.SPAMFILTER is directly integrated onto your computer landscape. A single modification of DNS entries is necessary so that e-mails are sent to Archi.SPAMFILTER servers and then forwarded after analysis towards your email server.

Archi.Net contractually commits to a level of quality and results by a Service Level Agreement (SLA) guaranteeing a low rate of spams and « false-positives. These legitimate messages considered as spam.

Based on a standard messaging protocol, Archi.SPAMFILTER is compliant with your e-mail server. Archi.SPAMFILTER is built on a redundant architecture which confers a very high availability thus ensuring a permanent accessibility of your e-mails. Moreover, if your mail server is available during a lapse of time, your email will be temporarily stored on our Archi.SPAMFILTER servers until your restored service.

ARCHI.SPAMFILTER CHARACTERISTICS

Effective : Stops spams before they arrive on your e-mail server. The level of quality and results are guaranteed by a SLA.

Simple : Takes less than one hour to implement. Requires no hardware or software installation. Solution ready to go, self sufficient and providing continued upgrades.

Performances : Eases network traffic and improves e-mail server load.

Available : Several redundant Archi.SPAMFILTER servers, supervised 24hours a day.

Secure : Protect your e-mail server from the outside against spams, viruses, denial of service attacks and relay.

Advanced : Uses the most recent technologies, combining standardd processes and on-the-fly analysis methods.

Compliant : Independent from your e-mail server.

International : Designed to detect spams in different languages.

DESIGN & WORKING PRINCIPLES

Archi.SPAMFILTER is a leading edge solution conceived to reduce to the maximum the rate of false-positives. The strength of Archi.SPAMFILTER lies in a sensible combinayion of the most recent technics in psam detection and analysis of messages within the SNMP transaction itself.

Archi.SPAMFILTER Use an extremely advanced method of e-mail scoring based on numerous analysis technics : rbl, heuristic analysis, bayesian method, database of spams, URL validation, recording of DNS, automatic Whitelists. This analysis is performed during the transaction in which messages reach Archi.SPAMFILTER servers. Thus allowing the right action based on the result of the analysis itself. Depending on the scoring the messages will be accepted, refused temporarily (Greylists), rejected permanently or rejected with session holding (Teergrubing). The interest of this technology is that gurantee a protection against spams as well as acting spammers and managing false-positives.

Administration interface enables you to control how message are filtered and what actions should be implemented when a spam or a virus is detected. You can add your own filters and show your reports and logs of analysis.

Functionalites :

- **Antispam** : Archi.SPAMFILTER vstops the undesired electronic messages before they reach your e-mail server and the employee's boxes. Archi.SPAMFILTER fights the false positive and assures a rate close to zero ;
- **Antivirus** : Archi.SPAMFILTER integrate two antivirus software which works in addition to the antispam filter thus stopping the viruses transferred via e-mails (note that viruses are more and more spread using spam technic) ;
- **Antirelay** : Archi.SPAMFILTER fights the relaying to avoid for your server to be used by a third party to send illicit mails. This fraudulent use of the server generates a problem of availability and quality of service for the compagny which gets her identity was usurpted. The relaying engages the responsability of your compagny ;
- **Denial of service** : Your servers are not directly visible any more on the internet but are accessible throught Archi.SPAMFILTER, thus they are not subject to attacks by denial of service technics ;

IN ORDER TO APPRECIATE ARCHI.SPAMFILTER'S QUALITY, WE PROPOSE A FREE OF CHARGE 15 DAYS OF FULL TRIAL PERIODE !

Libre et productif.
